Hedberg, Hollis Dow (1903-1988)

Hollis Dow Hedberg Papers, 1970-1984

Physical Description: 4mss

Description: The collection consists of the papers of geologist Hollis Dow Hedberg and includes JOIDES correspondence, meetings and committees dated 1970-1984.

Excerpted from Institute for the Study of Earth and Man website: Hedberg's "...professional activities spanned both industry and academia, in both pure and applied research. He made substantive contributions to such areas of geology as paleontology, stratigraphy, sedimentology, stratal compaction, geophysics, the geology of source rocks, hydrocarbon exploration, and the history of geology. Dr. Hedberg was also active in the geological exploration of the ocean floors. This, in turn, led to extensive contributions to the Law of the Sea. Perhaps his greatest contribution, however, was in the leadership he provided in formulating and establishing the International Code of Stratigraphic Nomenclature...."
