Thomas, William Hewitt 1926-

William Hewitt Thomas Papers, 1917-1992

Physical Description: 2mss, ½ mss, 1 shoe box

Description: The accession consists of student notes, field notes, and laboratory data of biologist William Hewitt Thomas. The accession is comprised largely of laboratory notebooks and computation books, although the accession also includes one folder on Roger Revelle dated 1991, the year of Revelle's death. Student notes include material on a phycology course at San Diego State University, Marine Ecology courses taught by William Fager at Scripps Institution of Oceanography, and courses on statistics, programming in Fortran and other courses taken by William Hewitt Thomas. The field notes include notes on the Eastern Brook Lake Project in 1987 and notes for studies of two High Sierra (California) lakes in 1978. The laboratory data include notes generated by Thomas and Carl H. Gibson for their 1990-1992 study of turbulence and marine phytoplankton. The accession also includes Dr. Thomas' notes on W. E. Allen's plankton data.

Marine phytoplankton Pacific Coast (U.S.); Freshwater phytoplankton California Eastern Brook Lake: Freshwater microbiology; Periphyton; Gibson, Carl Hunter; Revelle, Roger
